Investigation Tips

LPA is a marker of genetic predisposition of heart disease

Normally it should be less than 30

Laughter dose

The seven-year old girl told her mom, "A boy in my class asked me to play doctor." "Oh, dear," the mother nervously sighed. "What happened, honey?" "Nothing, he made me wait 45 minutes and then double-billed the insurance company."

Repertory of Tongue

Ash colored. —

Merc. i. fl.

Asleep. —

Borax.

Atrophy of tongue,
ac.

Mur.

Thus spoke the philosopher.....

Homœopathy as a profession carried a challenge. The possibilities of its art are infinite.

One of the outstanding problems today is cancer. It intrigues the mind of the young man, and his search for the cause and cure of cancer is indefatigable. This is a challenge to the homœopathic physician as well, since he has remedial aids that ordinary practice knows not; but let the young man consider this problem in the light of public health service and its insistence on the use of serums and vaccines. Let him weigh his ability to stand upon his adherence to fundamental principles. If he takes up the task on the frontier of cancer study, will he remember the relationship between homœopathy (not isopathy) and disease conditions, or will he forget that human cell tissue is easily stimulated to over growth, under certain hereditary tendencies? He has here a field for work which offers much elbow room and all the dangers of the pioneer.

Dr. H.A. Roberts

Lets get quizzical

Melophobia is the fear ofand the medicine is

Agoraphobia is the fear of and the medicine is

Carcinophobia is the fear of and the medicine is

Anthropophobia is the fear of and the medicine is.....

The life of stalwarts....

Dr Samuel Hahnemann

When Hahnemann was five years of age, his father had a habit of giving his son what he called "thinking lessons." the childhood habit followed him through his lifetime. The poor father simply desired for his son an upright, careful life, as had been his own though he tried to prevent him from becoming deeply interested in reading and study. But Samuel would endeavor to hide, and would flee with his beloved books to the remotest nooks of the house.

Japanese encephalitis

- Japanese encephalitis is a disease caused by the mosquito-borne Japanese encephalitis virus. Transmission to humans may cause severe symptoms. One of the most important vectors of this disease is the mosquito *Culex*.
- Japanese encephalitis has an incubation period of 5 to 15 days and the vast majority of infections are asymptomatic: only 1 in 250 infections develop into encephalitis.
- In 2005, a Japanese encephalitis epidemic occurred in the states of Uttar Pradesh and Bihar and throughout Nepal, resulting in more than 5000 cases and approximately 1000 deaths.
- Mortality rates are 5-10%. In less-developed areas, mortality rates may exceed 35%. Worldwide, more than 10,000 deaths attributable to Japanese encephalitis are reported per year.
- Approximately 33-50% of survivors of symptomatic disease have major neurologic sequelae at 1 year, including seizure disorders, motor or cranial nerve paresis, or movement disorders
- previous [dengue infection](#) may be associated with decreased morbidity and mortality rates, possibly due to partial protection of cross-reacting antiviral antibodies..

to be contd.....

ARBUTUS ANDRACHNE (Strawberry Tree)

A remedy for **eczema associated with gouty and rheumatic symptoms.**

Arthritis; especially larger joints. Urine rendered more clear. Lumbago. Symptoms shift from skin to joints. Vesical symptoms.
